PROFESSIONAL SUMMARY

DevOps and Platform Engineer with end-to-end ownership of production environments, from air-gapped edge devices to highly available Kubernetes clusters and multi-region AWS. CKA and AWS Solutions Architect certified. Builds Infrastructure as Code (Terraform, CloudFormation, Ansible), CI/CD and GitOps pipelines (GitHub Actions, Jenkins, Bitbucket Pipelines, FluxCD, ArgoCD), and observability, disaster recovery and self-healing automation that keep systems reliable. Designs and ships production AI systems: RAG, MCP servers and LLM agents for AIOps and organizational knowledge.

CORE SKILLS

Kubernetes & Containers: Kubernetes (CKA), K3s, Amazon EKS, Docker, Helm (umbrella charts), KEDA, Karpenter, RBAC, K9s

CI/CD & GitOps: GitHub Actions, Jenkins, Bitbucket Pipelines, FluxCD, ArgoCD, JFrog Artifactory, ECR

Cloud & IaC: AWS (Solutions Architect Associate certified), Terraform, Terragrunt, CloudFormation, Ansible

Reliability & Observability: Prometheus, Grafana, ELK / Elastic Stack, CloudWatch, OpenTelemetry, Jaeger, Fluent Bit, alerting, incident response, disaster recovery, load testing

Networking & Security: Linux administration, WireGuard VPN, VPC design, Nginx, load balancing, DNS, TLS, iptables, IAM least privilege, SAST, shift-left security, Trivy, JFrog Xray, Fail2ban

Data & Messaging: PostgreSQL, Aurora, MySQL, DynamoDB, Elasticsearch, Kafka, ActiveMQ (Artemis), Amazon MQ, SQS

AI & Agentic Systems: Agentic workflows, Claude API, MCP servers, RAG, Qdrant, embeddings, LangChain, Ollama, n8n, Gemini API

Languages: Python, Bash, Go, Groovy, SQL

EXPERIENCE

DevOps, Platform, Infrastructure & AIOps Engineer | Polustech

Jan 2026 – Present

- Led migration of an edge intelligence platform from systemd to a 13-microservice highly available K3s cluster, deployed across 50 units supporting 200+ concurrent isolated operators.
- Engineered a Helm umbrella/subchart architecture with FluxCD GitOps across 4 production sites (5 products per customer), with zero-touch per-unit provisioning through Ansible.
- Designed a multi-region AWS platform (4 customers, 4 regions) with per-customer isolated CloudFormation nested stacks (VPC, Aurora, Amazon MQ, Cognito, CloudFront) and a WireGuard hub-and-spoke VPN, automated with Ansible and SSM.
- Built disaster recovery for the VPN layer after a production incident: keys in Secrets Manager, automatic peer restore on deploy and daily snapshots, so rebuilds no longer require re-onboarding field units.
- Built Bitbucket Pipelines CI/CD for multi-environment deploys (validation, SAM and database migrations, guarded teardown) and automated image builds and Helm chart version bumps.
- Hardened security with least-privilege IAM deploy roles, VPN firewall rules and secrets management.
- Built a Kubernetes-native dual-LLM agent (Ollama offline / Claude online) that monitors, self-corrects and escalates microservice failures on field-deployed edge devices.
- Architected an AIOps ingestion pipeline (n8n, S3 triggers, Qdrant RAG) with CloudWatch/DynamoDB confidence logging for automated root-cause analysis (RCA).
- Built MCP servers (Confluence RAG over Qdrant, read-only Git/PR access) and an “Organizational Brain” knowledge layer with multi-session Claude architecture.
- Designed custom monitoring and alerting for event-driven edge devices, surfacing real-time health and failure signals across field units.

Developer Support Engineer | JFrog

Apr 2024 – Aug 2025

- Supported enterprise CI/CD pipelines on Kubernetes, Helm and AWS with Artifactory at the center; resolved complex network, storage and performance bottlenecks in mission-critical environments with high resolution rates on escalated tickets.
- Led a FinOps initiative with Terraform, Lambda, AWS Organizations and tagging that eliminated 80% of cloud waste and reduced monthly spend by 30%.
- Applied DevSecOps practices with JFrog Xray for automated vulnerability scanning and license compliance.

DevOps Trainee | Develeap Bootcamp

Jul 2023 – Jan 2024

- 900-hour hands-on program: Terraform, Ansible, CloudFormation, Python, Bash, Docker, Kubernetes, Jenkins, GitHub Actions, AWS.

PORTFOLIO

For a full view of my tech stack and projects, visit my agentic portfolio website, where an AI agent answers your questions: **https://liormilliger.com**

CERTIFICATIONS

Certified Kubernetes Administrator (CKA) · AWS Certified Solutions Architect – Associate · AWS Certified Cloud Practitioner

EDUCATION

Develeap DevOps Bootcamp (900 hrs) · CCNA Formal Training (100 hrs) · Master of Music, Jerusalem Academy of Music · B.A. Music Education, Jerusalem Academy of Music
